

3 Hour Workshops

Working with ModelBuilder in ArcGIS

Duration: 3 Hours

Wish you can reduce the amount work and time for geoprocessing?

ModelBuilder has been around for a while in ArcGIS Suite and is one of the easy to use tool. This application is cable of helping users to create personalised tools and manage large geoprocessing workflows. This 3-hours course builds from the knowledge of the ArcGIS 2 and ArcGIS 3 to create basic Models. In this course you will learn the best practise of creating interactive models and design sophisticated tools that can loop through multiple inputs. Explore guidelines to set up in-line variables and building an efficient modeling workflow that produces valid results.

Goals

Examine an existing model.

Create and validate a model.

Set model parameters for reuse with different data or inputs.

Who should attend?

GIS Professionals

GIS Analysts

GIS Users

GIS Technical Leads

Suggestion

Completion of **ArcGIS 2: Essential Workflows and Getting Started** with **ArcGIS Pro** or equivalent knowledge.

Software

Esri will provide the following software to use during class:

- **ArcGIS Pro 2.2**
- **ArcGIS Online Organizational Account**

Training for Continuous Professional Development
