ArcGIS 4: Sharing GIS Content on the Web

Duration: 3 Days (24 Hours)

Make maps and apps available across your organization.

Learn to share geographic content, making it accessible to everyone who needs it, when and how they want to access it. This course teaches how to publish your organization's authoritative GIS data, maps, and tools as services that can be discovered on your organization's public or private ArcGIS portal, easily accessed from desktop and online applications, and featured in web and mobile apps.

Note: ArcMap is used to complete course exercises.

Goals

Determine which sharing option is appropriate for your needs

Author and publish map, feature, geoprocessing, and image services.

Share GIS resources as stand-alone services and in web maps and apps.

Who should attend?

GIS Analysts   **GIS Specialists**   **Data managers**   **Database administrators**

Suggestion	Software
Completion of **ArcGIS 2: Essential Workflows and equivalent**	Esri will provide the following software to use during class:
